DETAILED ACTION

Specification

1. The application has not been checked to the extent necessary to determine the presence of all possible typographical and grammatical errors. However, Applicant's cooperation is requested in correcting any errors of which he/she may become aware in the application.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-25 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-24 of copending Application No. 10/354,159. Although the conflicting claims are not identical, they are not patentably distinct from each other because the vector aspect claimed in the instant application (10/812,975) is fully disclosed and also claimed in the '159 application. For example, the data shuffler apparatus of the '159 application contains, among other claimed features, a plurality of bit shufflers each inputting corresponding

Art Unit: 2819

x1 of the input bits and outputting a 2-bit vector {x0', x1'}; and two 2-bit vector shufflers inputting the 2-bit vectors, wherein an output of the 2-bit vector shufflers is a combination of corresponding two 2-bit vectors, such that the 2-bit vector shufflers operate on the vectors {x0', x1'} in the same manner as the bit shufflers operate on the bits (x0,x1).

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Objections

4. Claims 20, 21, 22, 24, and 25 are objected to because of the following informalities: because they are improper dependent claims. Correction is required.
